

Rapid Environmental Assessment (REA) Checklist

Instructions:

- (i) The project team completes this checklist to support the environmental classification of a project. It is to be attached to the environmental categorization form and submitted to the Environment and Safeguards Division (RSES) for endorsement by the Director, RSES and for approval by the Chief Compliance Officer.
- (ii) This checklist focuses on environmental issues and concerns. To ensure that social dimensions are adequately considered, refer also to ADB's (a) checklists on involuntary resettlement and Indigenous Peoples; (b) poverty reduction handbook; (c) staff guide to consultation and participation; and (d) gender checklists.
- (iii) Answer the questions assuming the "without mitigation" case. The purpose is to identify potential impacts. Use the "remarks" section to discuss any anticipated mitigation measures.

Country/Project Title:

EIA AND SIA OF POL STORAGE AND PORT FACILITIES IN THILAWA
SPECIAL ECONOMIC ZONE (SEZ)

Sector Division:

KYAUKTAN TOWNSHIP, YANGON REGION, MYANMAR

Screening Questions		Yes	No	Remarks
A. Project Siting				
Is the Project area adjacent to or within any of the following environmentally sensitive areas?				
1	Cultural heritage site	√		There is no cultural heritage site within the project area, but there are Kyaukawk Pagoda, --- years old, and Pardagyi Pagoda, about ---- years old, Kyaik Hmaw Wun Pagoda about --- km away from the project site.
2	Protected Area		√	To be confirmed by relevant Government Institution
3	Wetland	√		There are four reservoirs (Zarmani Inn, Thilawa, Banbwegone, Sinkan) adjacent to SEZ Area. To be identified other wet lands by site visits (streams, etc.)

**PORTS AND HARBORS
ANNEX H: SEZ THILAWA**

Screening Questions		Yes	No	Remarks
4	Mangrove	√		Scattered mangrove vegetations grow along the coastline of tidal Yangon River (within the bank of the project site)
5	Estuarine	√		There is Hmaw Wun Creek (Chaung), about ---- km away from the project site.
6	Buffer zone of protected area		√	
7	Special area for protecting biodiversity		√	
B. Potential Environmental Impacts Will the Project cause...				
1	encroachment on precious ecology resulting in loss or damage to fisheries and fragile coastal habitats such as coral reefs, mangroves, and seagrass beds?	√		
2	disturbance to precious ecology (e.g. sensitive or protected areas)?	√		Possibility of disturbance to Marine ecology by vessel noise, and pollution by oil leakage and improper sewage disposal of ships
3	short-term increase in turbidity and sunlight penetration as well as changes in sediment pattern and flows at dredging site?	√		
4	removal and disturbance of aquatic flora and fauna at dredging site?	√		Disturbance of aquatic fauna (marine life) is possible at dredging site.
5	deterioration of water quality due to silt runoff and sanitary wastes from worker-based camps and chemicals used in construction? alteration of surface water hydrology of waterways resulting in increased sediment in streams affected by increased soil erosion at construction site?	√		No significant soil erosion by construction works, but scouring by dredging of sand at Yangon River bed may cause alteration of surface water hydrology.
6	alteration of bottom surface and modifications to bathymetry, causing changes in tidal bore, river circulation, species diversity, and salinity?		√	
7	changes in sediment pattern and littoral drift that may cause beach erosion of neighboring areas?		√	There is no significant beach adjacent to the project site.
8	modification of terrestrial habitat by upland disposal of dredged material or covering of potential archaeological sites with dredge spoil?		√	

**PORTS AND HARBORS
ANNEX H: SEZ THILAWA**

Screening Questions		Yes	No	Remarks
9	short-term air quality degradation due to dredging-related operations?		√	short-term air quality degradation not by dredging-related operations but by pile driving machines for jetty foundation.
10	increased air pollution due to project construction and operation?	√		Possibility of air pollution by the project construction and operation
11	noise and vibration due to blasting and other civil works? noise and vibration due to project construction or operation?	√		May encounter noise and vibration if heavy construction works are done simultaneously by each company.
12	risks and vulnerabilities related to occupational health and safety due to physical, chemical, biological, and radiological hazards during project construction and operation?	√		Risk and vulnerabilities (especially fire hazard) in construction and operation period of POL distribution and leakage
13	creation of temporary breeding habitats for diseases such as those transmitted by mosquitoes and rodents?	√		No proper sanitation program carried out as yet; to be assessed later.
14	dislocation or involuntary resettlement of people?	√		Risk to community health and safety during transport and disposal of POL
15	disproportionate impacts on the poor, women and children, Indigenous Peoples or other vulnerable groups?			To be identified.
16	other social concerns relating to inconveniences in living conditions in the project areas?	√		Possible social concerns if inconveniences in living conditions in the project areas occur.
17	social conflicts if construction depletes local fishery resources on which communities depend for subsistence?	√		If large population of imported labor forces are employed.
18	social conflicts if workers from other regions or countries are hired?	√		Certain conflict may encounter if imported labors from other regions are employed
19	poor sanitation and solid waste disposal in construction camps and work sites, and possible transmission of communicable diseases from workers to local populations (such as STI's and HIV/AIDS)?	√		No proper solid waste disposal system at present construction stage, to be assessed later.
20	social concerns relating to local inconveniences associated with port operation (e.g. increased volume of port traffic, greater risk of accidents, communicable disease transmission)?	√		If SEZ area is fully developed.

**PORTS AND HARBORS
ANNEX H: SEZ THILAWA**

Screening Questions		Yes	No	Remarks
21	deterioration of water quality due to ship (e.g. ballast water, oil waste, lubricant and fuel spills, sewage) and waterfront industry discharges?	√		The project concern is construction of oil storage and transfer facilities and jetties.
22	generation of solid waste and/or hazardous waste?	√		Solid waste and hazardous waste may exist during construction phase.
23	use of chemicals?	√		Certain Chemicals from admixtures in construction and paint works
24	generation of wastewater during construction or operation?	√		To be monitored for clean environment.
25	increased noise and air pollution resulting from airborne emissions (e.g. gas, smoke, fumes) from maneuvering and berthing ships and the waterfront industry?	√		If SEZ area is fully developed.
26	large population increase during project construction and operation that causes increased burden on social infrastructure and services (such as water supply and sanitation systems)?	√		Large population influx by the development of SEZ
27	social conflicts especially when workers from other areas are hired?	√		Certain conflict may encounter if imported labors from other regions are employed
28	risks to community health and safety due to the transport, storage, and use and/or disposal of materials such as explosives, fuel and other chemicals during construction and operation?	√		Risk to community health and safety during transport and disposal of POL
29	community safety risks due to both accidental and natural hazards, especially where the structural elements or components of the project are accessible to members of the affected community or where their failure could result in injury to the community throughout project construction, operation and decommissioning?	√		Fire hazard to be watched and monitored to prevent possible air pollution by leakage of POL.

**PORTS AND HARBORS
ANNEX H: SEZ THILAWA**

Climate Change and Disaster Risk Questions The following questions are not for environmental categorization. They are included in this checklist to help identify potential climate and disaster risks.		Yes	No	REMARKS
1	Is the Project area subject to hazards such as earthquakes, floods, landslides, tropical cyclone winds, storm surges or tsunamis and climate changes (see Appendix I)?	√		The project site is situated at the mouth of Yangon River so that floods, tropical cyclone, winds, and storm surge may occur.
2	Could changes in precipitation patterns or extreme events over the lifespan of the Project affect its sustainability and cost (e.g., increased wave action, storms and erosion of infrastructure)?		√	
3	Does the Project use or depend on resources which could be affected by climate change such as changes in temperature, precipitation, wind (e.g., warmer water and increased salinity of water)?		√	
4	Are there any demographic or socio-economic aspects of the Project and Project area (e.g., a harbor that serves as an important evacuation route during emergencies) that increase the vulnerability of the Project and its surrounding area?	√		Change in demographic or socio-economic aspects due to increased population and labor.
5	Could the Project potentially increase the vulnerability of the surrounding area (e.g., by increasing industry and storage areas of goods that may be lost to flooding and storms)?	√		Increased traffic and housing area by the SEZ development.

* Hazards are potentially damaging physical events.

Environments, Hazards and Climate Changes

Environment	Natural Hazards and Climate Change
Arid/Semi-arid and desert environment	Low erratic rainfall of up to 500 mm rainfall per annum with periodic droughts and high rainfall variability. Low vegetative cover. Resilient ecosystems & complex pastoral and systems, but medium certainty that 10–20% of drylands degraded; 10-30% projected decrease in water availability in next 40 years; projected increase in drought duration and severity under climate change. Increased mobilization of sand dunes and other soils as vegetation cover declines; likely overall decrease in agricultural productivity, with rain-fed agriculture yield reduced by 30% or more by 2020. Earthquakes and other geophysical hazards may also occur in these environments.
Humid and sub-humid plains, foothills and hill country	More than 500 mm precipitation/yr. Resilient ecosystems & complex human pastoral and cropping systems. 10-30% projected decrease in water availability in next 40 years; projected increase in droughts, heatwaves and floods; increased erosion of loess-mantled landscapes by wind and water; increased gully erosion; landslides likely on steeper slopes. Likely overall decrease in agricultural productivity & compromised food production from variability, with rain-fed agriculture yield reduced by 30% or more by 2020. Increased incidence of forest and agriculture-based insect infestations. Earthquakes and other geophysical hazards may also occur in these environments.
River valleys/deltas and estuaries and other low-lying coastal areas	River basins, deltas and estuaries in low-lying areas are vulnerable to riverine floods, storm surges associated with tropical cyclones/typhoons and sea level rise; natural (and human-induced) subsidence resulting from sediment compaction and ground water extraction; liquefaction of soft sediments as result of earthquake ground shaking. Tsunami possible/likely on some coasts. Lowland agri-business and subsistence farming in these regions at significant risk.
Small islands	Small islands generally have land areas of less than 10,000km ² in area, though Papua New Guinea and Timor with much larger land areas are commonly included in lists of small island developing states. Low-lying islands are especially vulnerable to storm surge, tsunami and sea-level rise and, frequently, coastal erosion, with coral reefs threatened by ocean warming in some areas. Sea level rise is likely to threaten the limited ground water resources. High islands often experience high rainfall intensities, frequent landslides and tectonic environments in which landslides and earthquakes are not uncommon with (occasional) volcanic eruptions. Small islands may have low adaptive capacity and high adaptation costs relative to GDP.
